

assignment_category_14

Dear Candidates,

We are pleased to inform you that you have successfully passed the first round of the selection process!! 🎉

Your application and skills have impressed us, and we are excited to move forward with you in the next stages. We are excited to have you explore this opportunity with us. This project is designed to assess your skills, creativity, and problem-solving abilities. It will help us understand how you approach challenges and your ability to deliver high-quality solutions.

Language Exchange (learn language in a friendly atmosphere)

Project Overview and Discussion

This project is an **Online Tutor Booking Platform**, designed to connect users with tutors across various languages and subjects. It simplifies the process of finding, reviewing, and booking tutors through an interactive and user-friendly interface. The platform is essential for promoting accessible learning opportunities globally and streamlining the tutor hiring process. Users can browse categories, view detailed tutor profiles, and book sessions securely. Features like adding tutorials, managing bookings, and reviewing tutors enhance user engagement. Similar platforms include **Preply** and **Italki**, which offer comparable services for online tutoring and language learning.

Ensure the Following things to get 100% mark

- Include at least 15 meaningful commits on the client side & 8 meaningful commits on the server side with descriptive messages.
- Include a README file with the project name, purpose, live URL, key features, and any npm packages you have used.
- Ensure the website is fully responsive on mobile, tablet, and desktop.
- Secure Firebase configuration keys using environment variables.
- Secure your MongoDB credentials using the environment variable.
- Create a design that encourages recruiters. Color contrast should please the eye & ensure that the website has proper alignment, space and The website does not express gobindo design

Deployment Guideline

If your Deployment is not okay you will get 0 and may miss the chance of our upcoming rewards.

- Ensure that your server is working perfectly on production and not throwing any **CORS / 404 / 504** Errors.
 - Ensure that your Live Link is working perfectly and that it is not showing errors on Landing in your system.
 - ⚠ ensure that the page doesn't throw any error on reloading from any routes.
 - ⚠ Add your domain for authorization to Firebase if you use **Netlify / surge**
 - ⚠ Logged in User must not redirect to Login on reloading any private route
-

Layout & Page Structure

1. Navbar:

- **Website Name/Logo:** Should reflect the theme
- **Home:** Displays the homepage with key sections and posts.
- **Find tutors**
- **Add Tutorials**
- **My Tutorials**
- **My booked tutors**
- **Conditional Login/Logout:**
 - If not logged in, show a *Login* button.
 - If logged in, show the user's profile picture and *Logout* button.
 - When hovering over the profile picture, show the user's display name.
- **Profile Picture (Dropdown):**
 - **User name (not clickable)**

2. **Main Section:** Main Section will show different pages based on routes.

3. **Footer:** A Footer with all relevant information and eye-catching design.

Authentication System

On the Registration and Login pages, display relevant error messages when necessary.

Login Page: When a user clicks on the login button, they will be redirected to the login page having the following:

- Email/Password-Based Login
- Google Sign-in
- A link that will redirect to the registration page

Registration Page: The Registration page will have the Email / Password form having

the following fields:

- Name
- Email
- Password
- Photo URL

Note: Do not enforce the email verification method and forget & reset password method, as it will inconvenience the examiner. If you want, you can add after receiving the assignment result.

Home Page

- **Banner** section will have a banner/carousel (images should be relevant to the website)
- **Stats** section will have 4 column
 - In the first column show all the tutors counts.
 - In the second column show all the review counts.
 - In the third column, show all the languages
 - In the fourth column show all the user's counts.

Stats section will be

32,000+
Experienced tutors

300,000+
5-star tutor reviews

120+
Subjects taught

180+
Tutor nationalities

4.8 ★ ★ ★ ★ ★
on the App Store

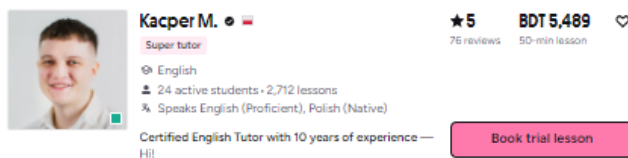

- **Language Category** section with a minimum of 9 cards. On this card, you will have to show the following information
 - Logo of category
 - Title
 - Right arrow icon
 - Each card is clickable when the user clicks the card and navigates to the find-tutors page.

Category section will be

- Added at least two extra sections on the home page relevant to the website.

You can follow this card or you can style your own

After clicking the language category section card from homepage the user redirects to the (/find-tutors/:category) page and shows Tutors based on category containing information (name, image, language, price, review, details). Suppose if users click the English tutors card and see all the English tutors.

Other Requirements Guideline

Find tutors page:

After clicking the find tutors from navbar, the user redirects to the (/find-tutors) page and shows all tutors added from the add tutorials page containing information (name, image, language, review, details).

- When click the details button user redirects to the (/tutor/:details) page (see tutor details page)

Tutor Details page(private route):

After clicking the details button from the find tutor page , the user redirects to the (/tutor/:details) page and shows tutors details containing information (name,image,language,description, price,review,book button).

- When the user clicks the "Book" button, the following details are stored in a new collection in the database:
 - tutorId (this id will be _id of tutor)
 - Image
 - language
 - Price
 - tutorEmail (who add this tutorial)
 - email (who logged in)

My Booked Tutor(private route):

This page shows all the booked tutors added from the tutor details page, including their information (name,image, language,price,and review button)

- When the user clicks the "Review" button, the review count increases by 1 for the specific tutor.

Hints: Find all tutorials in the collection with a specific courseId and update the review field using MongoDB \$inc operator.

Add Tutorials(private route):

In this route user will show a form with the following input field

- name(who logged in)
- email (who logged in)
- Image (tutorial image)
- language
- price
- description
- review :(0 by default)
- submit button

When a user clicks the submit button, save the information into a collection in your database.

My Tutorials(private route):

This page displays the user's tutorials added from the "Add Tutorial" page, shown in a table with the following information.

- Name
- image
- language
- price
- description
- review
- delete button
- update button

Delete Button:

When the user clicks the "Delete" button, the data is removed from the database, and the UI is updated with the latest data.

Update Button

On this page, the user can update information for a specific field or multiple fields.

When the users click the update button you can redirect another page or show a modal with the following input field

- name(not editable)
- email(not editable)
- image
- language
- price
- description
- review (not editable)

- update button

When the user clicks the "Update" button, the information will be updated.

Additional

- Handle Loading state
 - Create Error Page
-

Challenge Requirement Guideline

1. **Search functionality :** On the find tutor page add a search functionality based on language. show all the queries where the search text matched with the language name in the query.
 2. **JWT Authentication:** Upon login, you will create a JWT token and store it on the client side. You will send the token with the call and verify the user. Implementing 401 and 403 is optional. Ensure you have implemented the JWT token, create a token, and store it on the client side for both email/password-based authentication and social login. You must implement JWT on your private routes.
 3. **Dark / Light Theme:** Implement a dark / Light theme toggling in your Navbar for the whole web application.
-

What to Submit

Live Site Link :

Github Repository (**server**) :

Github Repository (**client**) :

Optional Requirement Guideline

Implement any two tasks from the following optional list:

1. Try to use any other tailwind CSS library like - [mamba Ui](#), [shadcn](#), [chakra UI](#),
 2. Add a spinner when the data is in a loading state. You can add a gif/jpg, use any package or customize it using CSS.
 3. Explore and implement any of the animations from the Framer Motion.
 4. Add one extra feature of your own. This will help you in the future to differentiate your project from others.
 5. Implement Pagination in the Find Tutors Page. Show 6-9 services per page.
-
